**Delegation From Pakistan To Attend Eurasia Summit In Istanbul**

The 9th annual Eurasia Summit will be held at the Lilith International Convention Center, Istanbul, Turkey, from March 1–3, 2023.

The Summit, which is a major event in Eurasia, brings together leaders from various sectors to discuss and exchange ideas on a range of issues. This year, the Summit aims to focus on the opportunities and challenges posed by the current global landscape, with a special emphasis on economic development, technology, and sustainability.

Pakistan is represented by a strong delegation, showcasing the country's commitment to regional cooperation and the potential for mutual growth.

**CPEC Energy Projects Boost Pakistan's Economy: Kashif Younis**

Kashif Younis claimed that the price of electricity produced by wind and solar power plants is less than half of the electricity currently purchased in Pakistan from thermal sources.

Coordinating with the Federal Tax Ombudsman and Chairman of the Federal Board of Revenue, Younis stated at a webinar, organized by "The Role of CPEC in Meeting Pakistan's Energy Needs," field under the auspices of the Gold Ring Environmental Forum, a strategic think tank on Sunday that the CPEC energy projects have boosted Pakistan's economy by increasing the country's access to high-quality, less expensive energy.

Additionally, he claimed that CPEC projects had revitalized the country's economy and reduced energy costs for industries.
President claimed that having the Internet of Things (IoT) space was one of the best ways to engage and communicate with population members quickly. He added that the initiative would be implemented on Monday that, in addition to the traditional security, culture, and education, would also be a platform to put the projector on the stage that the people are the best thing to respond to the situation in the紧急, nation needs.

The president stressed the importance of the project’s future to the cybersecurity field, particularly when it comes to the personal data of individuals and modern technology. He added, “The project will be implemented at all levels of society, including institutions, organizations, and individuals.”

The president thanked the government’s efforts in this field and mentioned that Pakistan is working on this project in collaboration with several countries for the benefit of the people. He further added that the government is working on this project with the support of several countries and organizations for the benefit of the people.

The president also thanked the government for its efforts in this field and mentioned that they will be working on this project in collaboration with other countries for the benefit of the people. He further added that the government is working on this project with the support of several countries and organizations for the benefit of the people.
Biofuels are gaseous fuels or renewable liquid prepared from living organisms or the wastes that they produce. The growing biomass is not competed with agricultural land and they are made using non-arable land. A fourth generation biofuel is a form of advanced biofuels produced from lignocellulosic biomass, which is not edible and oil produced from non-food plants like algae and cyanobacteria (blue-green bacteria) which are grown in water instead of soil. The growth of these microorganisms is not only driven by solar energy but also by harvested sewage, which under anaerobic conditions, is converted into methanol or ethanol which is then converted into biodiesel.

dy, fermentation, and chemical synthesis. "Green" biofuels are produced from the metabolic activities of plants and algae, while "brown" biofuels are produced from the metabolic processes of microorganisms.

Biofuels offer several advantages over fossil fuels, including lower carbon emissions, reduced dependence on foreign oil, and the potential to use non-arable land. However, the production of biofuels also has some drawbacks, such as land use conflicts and potential negative impacts on biodiversity. Biofuels are not a panacea, but they offer a viable alternative to fossil fuels as we transition towards a more sustainable energy future. It is important to continue researching and developing biofuels to improve their efficiency, reduce their costs, and minimize their environmental impacts. By doing so, we can contribute to a cleaner, more sustainable, and more secure energy future for all.
The idea of storing various household things in natural sources stems back to a time when there were no contemporary alternatives. Ancient civilizations utilized ash, sand, herbs, and powdered plant parts to store grains and other foodstuffs, which were considered essential for survival.

The use of botanicals for stored product pest management is a traditional practice that originated from the need to protect food from the omnipresent threat of insects. Many spices and medicinal herbs have been found to possess insecticidal characteristics, as highlighted by the contemporary research.

### Use Of Botanicals For Stored Grain Pests

**By Danyal Haider Khan, Zain Zeb Khan, M. Ashir**

When discussing the use of botanicals for stored product pest management, it's crucial to consider the role of modern technology in enhancing the effectiveness of these natural solutions. The integration of botanicals with contemporary pest management strategies can lead to sustainable and environmentally friendly approaches.

Investment In South African Tech Startups Fell in 2022: Report

Prior to 2022, South Africa’s bubble was an ongoing concern. Was 2022 the year over? 2022 was the first year in the current cycle African Tech Startups Funding Report

South Africa experienced a year-over-year (YoY) decline of 35% in the number of startups receiving funding and the overall amount of funding received. In 2022, funding for South African tech startups fell to $53 million from $83 million in 2021.

A landmark year for tech startup founders in South Africa will be 2022. The number of startups receiving funding fell by 35%, to $53 million.

Climate Change Disasters Forcefully Displacing Africans

In 2022, the African continent was hit by the worst food insecurity in decades. More than 30 million people in Eastern Africa were internally displaced, as many as 60 million people in East Africa were internally displaced, and more than 10 million people in Somalia were forcibly displaced. The number of internally displaced people in Africa was the highest in recent history.

Drought in East Africa Risks Lives

Of 22m People: UN Official

2022 was the worst year in decades for food security in Eastern Africa, including the Horn of Africa, which is the worst affected region. The UN World Food Program’s regional director in Eastern Africa, David Lutomia, said in an interview with CNN that the situation was “critical.”

However, with IOC donations from key hydrocarbon assets, local companies have been able to improve their financial performance. In 2022, the Nigerian government released the Nigerian Petroleum Industry Act, which is expected to improve the financial performance of the gas market within the largest oil-producing countries of the world.
