脂肪酸
脂肪酸是最重要的蛋白质来源之一，它们在植物中也存在作为动物饲料的重要来源。（human consumption）

The soybean (Glycine max) is a species of legume that belongs to the Fabaceae family and is native to eastern Asia. It is considered one of the three most important food crops in the world, along with rice and wheat, as it provides a good source of protein for domestic animals like chickens, and is used in human consumption.

Soybean meal contributes to various food products, including tofu, soy milk, soy sauce, and animal feed. It is a major source of protein and is used as a meat substitute in vegetarian and vegan diets.

Agriculture
The soybean crop is a major agricultural commodity, with significant industrial and nutritional applications. It has become increasingly important for its potential as an alternative protein source in vegetarian and vegan diets.

Numerous Uses
Numerous uses of the soybean include production of soybean oil, soy milk, tofu, and soy sauce. The plant has multiple uses in the food industry, with soybean oil being used as a cooking oil and tofu and soy milk as plant-based milk alternatives.

Soybeans are the main ingredient in vegetarian and vegan diets, providing a good source of protein and essential nutrients. They are also used as a meat substitute in various dishes.

2020, global soybean exports were valued at approximately $52.4 billion.

Pakistan Urges UN To Address Gender Digital Gap

The seminar’s main theme is the digitization and technological changes, and education in the digital age. The seminar participants emphasized the importance of women and girls in STEM education, and highlighted the need for gender equality and equity in the digital age. The seminar participants also discussed the importance of innovation and technological advancements in the digital age for advancing gender equality and the empowerment of all women and girls. It was observed that from March 5 to March 8, 2023, the Pakistani delegates, including female delegates, worked extensively and achieved significant results.

The Pakistan delegation expressed its commitment to promoting gender equality and ensuring that women and girls have equal opportunities in the digital age. The delegates emphasized the need for inclusive and equitable digital policies, and highlighted the importance of empowering women and girls to participate in the digital economy.

Pakistan is one of the most rapidly digitizing countries in the world, with a global population of over 2 billion people. According to the Top Producers, Pakistan’s digitization efforts have been commendable.

The top three producers of soybeans in the world are the United States, Brazil, and Argentina.

WPSA Organises Symposium To Promote Pakistani Poultry Industry

The main theme of the symposium was to promote Pakistani poultry industry and discuss various issues related to the poultry sector.

The symposium covered a range of topics related to the poultry industry, including the role of technology and digitalization in the industry, and the challenges faced by the poultry industry in Pakistan.

The symposium was attended by a large number of participants, including representatives from the poultry industry, government agencies, and research institutions.

Pakistan And International Trade Of Soybean

Soybean is one of the most traded commodities in the world, with a global soybean exports valued at approximately $52.4 billion.

Soybean is a major agricultural crop and is key component in international trade. It is an important source of protein and oil for human consumption and animal feed.

Vice Chancellors Of HESSA Partner Universities Depart For Study Tour

Vice Chancellors from eleven universities, led by the President of HESSA, visited the University of California, Berkeley, in the United States. The trip aimed to enhance the cooperation between Pakistan and the United States in the field of higher education.

The trip was part of a larger initiative aimed at increasing international cooperation and institutional capacity building. The visit also provided an opportunity for the HESSA partner universities to explore new collaborative opportunities and expand their global partnerships.
Digital Payments Platform Easypaisa Celebrates Intl Women's Day

The most popular digital payments platform in Pakistan, Easypaisa, joined hands with Telenor Pakistan to celebrate International Women’s Day by committing to support women’s financial empowerment. Easypaisa, a leader in digital payments platforms in Pakistan, has been pivotal in empowering women and men to access financial services, become self-sufficient, and contribute to the economic growth of their countries. Dr. Muhammad Ashraf, Chairman of Telenor Pakistan, and Dr. Muhammad Suleman Tahir, Vice Chancellor of Khyber University, emphasized the significance of this occasion and the progress made in empowering women.

On this International Women’s Day, we at TMB and Easypaisa are committed to working with other universities and organizations to support women in Pakistan. We have scheduled several events and initiatives to raise awareness about water management, rainwater harvesting, and soil conservation issues in the region. We believe that women make up more than half of our population, and it is our responsibility to provide them with the resources, tools, and support they need to take charge of their future and achieve their goals.

As a company, we commit to making Easypaisa an employer of choice by successfully implementing positive policies and initiatives. We will continue to support women’s financial inclusion and empowerment as we work to build a more inclusive Pakistan. Given how much more we can build on the growth that has been achieved, this opportunity to enhance positive policies and support women is a significant step forward.

Mr. Tariq Khan stated that Easypaisa believes in the power of women to drive economic growth and social progress. The company is proud to have supported women-led initiatives and collaborated with local organizations to build a financially inclusive society.

Easypaisa and Telenor Pakistan will continue to collaborate and address women’s issues. This partnership will help to provide women with the tools and resources they need to improve their financial situation and achieve their goals.

Easypaisa Celebrates Intl Women’s Day

Dr. Muhammad Ashraf, Chairman of Telenor Pakistan, stated that this occasion is an opportunity to celebrate the achievements of women in Pakistan and highlight the progress made in empowering them. He emphasized that women contribute significantly to economic growth and social progress.

On this occasion, Easypaisa and Telenor Pakistan will continue to support women’s financial inclusion and empowerment. The company is committed to making Easypaisa an employer of choice by successfully implementing positive policies and initiatives.

Soybean is the most important crop in the world for human consumption. Soybeans are a major source of protein for both human consumption and animal feed, as well as for industrial uses. The plant is used to produce a wide range of products, including soy milk, tofu, soy sauce, soy sauce paste, and animal feed.

In recent years, soybeans have become increasingly popular as a source of plant-based protein for use in a variety of personal care and consumer products such as pharmaceuticals, including those used in the production of soybean oil.

Soybeans are highly nutritious and contain a high percentage of essential amino acids, which are important for human health.

Soybean oil is used in a variety of personal care and consumer products such as pharmaceuticals, including those used in the production of soybean oil.

Soybeans are a major source of protein for both humans and animals. Soybean protein is used in a variety of personal care and consumer products such as pharmaceuticals, including those used in the production of soybean oil.

Soybean Meal is produced as a by-product of soybeans and is used in the production of animal feed, with poultry being the number one livestock sector for soybean consumption.

One of the major uses of soybeans globally is as livestock feed, followed by food uses. Soybean production worldwide amounted to around 10 million tonnes in 2020, with the top three producers being China, the United States, and Brazil.

In 2020, global soybean exports were valued at approximately $32.5 billion, with the United States, Brazil, and Argentina accounting for about 65% of global soybean exports. The European Union is the second-largest importing region for soybeans, followed by China, which accounts for around 15% of global exports.

The use of soybean meal in animal feed has been increasing due to its high protein content, which is essential for the growth and development of livestock. Pakistan’s soybean imports are expected to increase in the coming years due to the growing demand for animal feed.

The use of soybean meal in animal feed has been increasing due to its high protein content, which is essential for the growth and development of livestock. Pakistan’s soybean imports are expected to increase in the coming years due to the growing demand for animal feed.

Soybean oil is one of the most widely used cooking oils and is a rich source of nutrients, offering numerous health benefits. It is derived from the seed of the soybean plant, which is native to East Asia and has gained widespread popularity in recent years. The consumption of soybean oil is associated with various health benefits, including improved heart health, reduced cholesterol levels, and increased bone density. It is also a good source of essential fatty acids, which are necessary for optimal health. However, soybean oil contains certain compounds that may pose health risks, such as genistein and glycitin. Therefore, it is important to consume soybean oil in moderation and to be aware of any potential health concerns associated with its consumption.
Soybean is one of the most significantly nutritionally rich legumes worldwide. It is a valuable raw material for the production of proteins and edible value. It is a natural raw material with high nutritional value and can be utilized in many drinks since their introduction in the early 1900s. Carrots are winter vegetables used in a variety of cuisines to add flavour and texture; they are also consumed as snacks. Carrots are rich in beta-carotene, which the body converts into vitamin A, which is important for vision and tooth health. Carrots are a good source of vitamin C, which protects against scurvy and helps in wound healing. They also contain vitamin K, which is important for bone and tooth health. Carrots are rich in fiber, vitamins, and minerals, containing 280 milligrams of magnesium per 100 grams of raw soybeans.

The amount of waste sent to landfills is increasing in tandem with population growth, which is important to note and convert it to energy. Malaysia faces a threat of losing its forest cover and running out of room for the disposal of solid waste by 2050. The authorities and operators are actively looking for sustainable waste disposal systems to help manage the increase in waste produced every day. 23.87 metric tonnes of solid waste are produced every day in Kuala Lumpur, accounting for 24% of the country’s total waste. The situation is expected to worsen as more people move to urban areas, putting pressure on the country’s already fragile waste management system.

According to Ahmad Zamal Abdull, chief operating officer of Alam Flora Sdn Bhd, 2,500 metric tonnes of solid waste are produced daily in Kuala Lumpur, running out of room for the disposal of solid waste by 2050. According to Ahmad Zamal, Alam Flora Sdn Bhd has converted it to energy. The solution offers high performance, stability, and high-speed access from any location and is powered by Alibaba Cloud’s cutting-edge infrastructure and reliable, high-quality services. These features are essential for customer experiences.

The amount of waste sent to landfills is increasing in tandem with population growth, which is important to note and convert it to energy. Malaysia faces a threat of losing its forest cover and running out of room for the disposal of solid waste by 2050. The authorities and operators are actively looking for sustainable waste disposal systems to help manage the increase in waste produced every day. 23.87 metric tonnes of solid waste are produced every day in Kuala Lumpur, accounting for 24% of the country’s total waste. The situation is expected to worsen as more people move to urban areas, putting pressure on the country’s already fragile waste management system.

According to Ahmad Zamal Abdull, chief operating officer of Alam Flora Sdn Bhd, 2,500 metric tonnes of solid waste are produced daily in Kuala Lumpur, running out of room for the disposal of solid waste by 2050. According to Ahmad Zamal, Alam Flora Sdn Bhd has converted it to energy. The solution offers high performance, stability, and high-speed access from any location and is powered by Alibaba Cloud’s cutting-edge infrastructure and reliable, high-quality services. These features are essential for customer experiences.
