Moringa Plants Known As Miracle Plant
M. Majid Islam

The Moringa plant grows in many countries and is known as a magical plant all over the world. Its leaves, juice, seeds, flowers, and young shoots are edible. The Moringa tree is a fast-growing, drought-resistant, and hardy plant that can produce food, medicine, and income in a short period.

Soybean is one of the richest and cheapest source of protein and is the staple food of the people and animals of different parts of the world.

Pakistan Students Receive MEXT Research Scholarships From Japan

MBAH CHAUDHRY

In our surroundings, there are numerous opportunities for research and development. This adaptability is caused by the changing environment and the need for solutions to emerging challenges such as climate change, food security, and pollution.

The Higher Education Commission (HEC) of Pakistan is the national government body responsible for overseeing the education system in the country. The HEC works with the Ministry of Education to ensure that the education system is effective and meets the needs of the students.

The University of Agriculture Faisalabad (UAF) is a public university in Punjab, Pakistan, that focuses on agricultural research and development. The university has a strong research focus on improving crop yields and addressing food security challenges.

The University of Agriculture Faisalabad's Faculty of Animal Sciences is one of the largest and most respected in the country. The faculty has a strong research focus on improving livestock production and addressing food security challenges.

The General Headquarters Land's To Army For Corporate Farming

The General Headquarters Land's To Army For Corporate Farming (GHLCF) is a joint venture between the Pakistan Army and the Pakistan Farmers Cooperative Society. The joint venture was formed in 2012 to promote agricultural development and increase food security.

The GHLCF is committed to promoting sustainable agricultural practices and increasing food production. The joint venture has a strong focus on improving crop yields and addressing food security challenges.

UAE and Pakistan national weather forecasters will collaborate to enhance seismology and meteorology capabilities, following the launch of technical cooperation programmes.

UAE and Pakistan national weather forecasters have agreed to set up a joint programme to enhance seismology and meteorology capabilities. The agreement was signed during the 9th Regional Conference in the UAE and Pakistan’s national meteorological organisations.

The United Arab Emirates National Centre for Meteorology and Seismology (NCMS) and the Pakistan Meteorological Department (PMD) will work to enhance seismology and meteorology activity in the region, according to a statement issued by the NCMS on Friday.

Cooperation will include marine meteorological services, hydrology and flood forecasting, seismic warning, and even academic research to better monitor and predict natural disasters such as tsunamis and earthquakes.

Abdulrahman Al-Mansoori, NCMS director, and Malik Madiyar Khan, PMD director general and permanent representative of Pakistan with the World Meteorological Organization (WMO), signed the agreement.

“The Technical Cooperation Programme is another positive step taken to strengthen our cooperation with and improve our responsibility to monitor scientific activity in the UAE,” Al-Mansoori said.

The agreement was signed on the sidelines of the 9th Regional Conference in the UAE Regional Association II, held in Dubai by Dr. Abdullah Ahmed Al-Mansoori, NCMS director, and Malik Madiyar Khan, PMD director general and permanent representative of Pakistan with the World Meteorological Organization (WMO).

FAPUASA, presided over the meeting for the central and provincial chapters performance report. The performance report was approved after the re-election of FAPUASA for the year 2023.

Prof. Zaffar told media that the transport sector accounts for nearly 43 percent of the total airborne emissions in the country.

“The supply chain of materials used in the manufacturing of batteries for EVs is highly competitive, with China occupying a significant market share. This presents a viable opportunity for collaborative efforts with their Chinese counterparts in the manufacturing of electric vehicles, which can help reduce the upfront purchase price of EVs,” Khan stated.

While the limited capacity of many local manufacturers means that only small-scale local component production is feasible, the availability of multifaceted international support and government incentives, especially from the United States, China, and other countries, has encouraged local manufacturers to produce EVs, and Pakistan can benefit from these developments.

It is a golden gift of nature to all because it can potentially serve as a major source of seed protein for animal feed and human consumption and as a raw material for industries such as oil, pharmaceuticals, and food. Soybean is an economic crop. According to research, nutrition, the use of soybean meal, and other soy products has increased the weight of meat, milk, and eggs by 12%, 10%, and 9%, respectively. Some of the uses of soybean and soy products are:

1. **Soybean meal:** It is a high-protein feed ingredient used in animal feed. Soybean meal is rich in all essential amino acids and can replace fish meal in broiler feeds.
2. **Soy protein isolate:** It is used in the production of vegan meat products and as a protein source in meat analogues. Soy protein isolate is also used in the production of tofu and tempeh.
3. **Soy milk:** It is a popular alternative to cow milk and is used in various dairy products.
4. **Soy lecithin:** It is used as a emulsifier, stabilizer, and emulsifier in the production of ice cream, chocolate, and dairy products. Soy lecithin is also used in the production of soap.

Soybean also contains a variety of vitamins and minerals, such as iron, zinc, copper, and selenium, which are essential for the proper functioning of the body.
Diabetes mellitus is one of the most common chronic diseases worldwide. It affects millions of people and is a major cause of morbidity and mortality. Diabetes mellitus type 2 (T2DM) is the most common type, affecting about 90% of all cases. This type is characterized by insulin resistance and is typically associated with overeating, lack of exercise, and obesity. Diabetes type 1 (T1DM) is an autoimmune disease, affecting about 10% of all cases, and is usually diagnosed in children and young adults. It is characterized by the destruction of insulin-producing cells in the pancreas.

Diabetes is a chronic disease that affects the body’s ability to use glucose, a type of sugar found in many foods. Glucose is the main source of energy for the body’s cells. The body controls its levels with a hormone called insulin, which is produced by the pancreas.

When a person has diabetes, their body either doesn’t produce enough insulin or doesn’t use the insulin it does produce properly. This results in high blood glucose levels, which can cause damage to blood vessels and nerves. Diabetes can lead to several serious health problems, including heart disease, stroke, kidney disease, blindness, and nerve damage.

Soybean oil is a type of vegetable oil that is derived from soybeans. It is a popular cooking oil and is used in a variety of food products. Soybean oil is high in monounsaturated and polyunsaturated fats, which can help lower the risk of heart disease.

In addition to being one of the most commonly consumed cooking oils, it’s also often used in many salad dressings and condiments as well. The soybean oil composition is made up mostly of unsaturated fat, with about 81 percent. Soybean oil is also used as a mosquito repellent.

Treatment and Management of Diabetes Mellitus

Biochemicals

Soybean oil has many unique phytochemicals including flavonoids, saponins, and sterols. These play a vital role in reducing cardiovascular disease and cancer. Soybean oil contains a type of omega-3 fatty acid that is derived from the seeds of the soybean plant.

In addition to being one of the most commonly consumed cooking oils, it’s also often used in many salad dressings and condiments as well. The soybean oil composition is made up mostly of unsaturated fat, with about 81 percent. Soybean oil is also used as a mosquito repellent.

Conclusion

Therefore, soybean oil is a useful food for us. We should promote the production and consumption of soybean oil.

Although there are some health concerns associated with soybean oil consumption, it is still considered a healthy choice for many people. Factors such as cooking temperature, quality, and methods of production can affect the overall nutritional value and quality of soybean oil.

Soybean oil processing steps

Soybean oil is manufactured through a series of steps that include:

1. Dehulling: The soybean hulls are removed to expose the seeds.
2. Grinding: The soybeans are ground to release the oil.
3. Pressing: The ground soybeans are pressed to extract the oil.
4. Refining: The oil is refined to remove impurities and improve its quality.
5. Deodorization: The oil is heated to remove any remaining impurities.
6. Stabilization: The oil is treated with antioxidants to prevent oxidation.

These steps ensure that the soybean oil is pure and safe for consumption. However, certain individuals may have an allergy or sensitivity to soy, and it is important to be aware of this when considering soybean oil as a cooking oil.
Soybean is an important source of food, protein, and oil. It is a high-quality protein rich seed crop.
The zebra shark (Stegostoma partitum), a member of the Stegostomatidae family was introduced to the Argentinian startup scene back in 2011 creating quite a little buzz making big waves.

Noria Irhak, a scientist, discovered recently on the seaport shark she was holding it was sitting on the surface of the transpicuous, warm ocean water. The Argentinian shark (Stegostoma partitum), a member of the Stegostomatidae family was named Kathlyn and displayed a little shark staff mascot for the team. Two male zebra sharks released earlier, were a beacon of hope for scientists working offshore the public population of zebras.
