Parasitism Disease In Livestock: A Neglected Disease

Part 1: "An extension education program is needed to educate the livestock owners and farmers to improve their knowledge about management practices of Paramphistomiasis." Read More...
Soybeans are a rich source of protein, fiber, and essential nutrients including iron, calcium, and vitamin C. They are also low in saturated fat and cholesterol, making them an excellent choice for individuals looking to maintain a healthy diet.

One of the most popular ways to consume soy is to use it as a substitute for meat. Soy protein is a great alternative to animal proteins since it contains all nine essential amino acids. Research has shown that consuming soy products can help to lower cholesterol levels in the body. This, in turn, reduces the risk of heart disease such as heart attacks and strokes. Soybeans also contain compounds called isoflavones, which have been shown to have anti-estrogenic properties. Studies have shown that soybean regular consumption can help lower blood pressure, reduce cholesterol, and prevent cancer.

Soy beans are also rich in calcium, magnesium, and other minerals, which can help maintain strong and healthy bones. Soybean contains these minerals, which are important for maintaining bone health and preventing osteoporosis.

Soybeans are a superfood with many health benefits, which can help improve your overall blood sugar levels. The health benefits of soybeans include its ability to improve cholesterol levels, reduce the risk of heart disease, and promote healthy aging.

Soybeans are packed with essential nutrients including fiber, vitamins, minerals, and antioxidants. The protein in soybeans makes it a low-cost, sustainable source of protein for vegetarians and vegans who may struggle to get enough protein from plant-based sources.

In addition, protein, soybean in also a good source of fiber, and can be incorporated into any diet. Soybeans are incredibly versatile and can be consumed in a variety of forms. They can be whole or divided, processed into tofu, milk, soy sauce, and tempeh. Soybean flour, protein, and fiber are among the many benefits of soybeans that have been shown to have anti-estrogenic properties. Studies have shown that soybean regular consumption can help lower blood pressure, reduce cholesterol, and prevent cancer.

Soy beans are also rich in calcium, magnesium, and other minerals, which can help maintain strong and healthy bones. Soybean contains these minerals, which are important for maintaining bone health and preventing osteoporosis.

**Impacts Of Social Media On Students**

*Vavek Bhanvari*

Social media has revolutionized the way we communicate and interact with each other. It has become an integral part of our daily lives, especially for students. But has it been all positive? In this article, we will explore the impact of social media on students.

**Why Soybean, A Protein Rich Crop Not Widely Cultivated In Pakistan**

*Arslan Mushtaq*

Soybean is a protein-rich crop that is widely cultivated in many countries. However, in Pakistan, the cultivation of soybean is not as widespread as in other countries. There are several reasons for this, including lack of awareness, limited research, and poor infrastructure. In this article, we will explore why soybean cultivation is not as popular in Pakistan.

---

**Worrying Numbers:**

Despite its numerous benefits, social media has its drawbacks. Let's delve into the negative impacts of social media on students.

1. **Addiction:** Social media addiction has become a serious problem for students. Many students spend hours on social media platforms, which affects their academic performance.
2. **Negative Impact on Health:** Social media can also have negative effects on students' health. Excessive screen time can lead to depression, anxiety, and even suicide.
3. **Distraction:** Social media can be a major distraction for students. It can affect their concentration and make it difficult for them to focus on their studies.
4. **Information Sharing:** Social media has made it easier for students to access information, but it can also be misleading for students.
5. **False Information:** Social media can spread false information, which can be detrimental to students.

On the other hand, social media can also have positive impacts on students. Let's take a look at some of the positive results.

1. **E-learning:** Social media can provide educational opportunities to students. Platforms like YouTube, Coursera, and Khan Academy provide free access to educational content.
2. **Networking Opportunities:** Social media can provide networking opportunities for students. They can connect with professionals and experts in their fields of study, share their research, and get feedback.

Social media has revolutionized the way we communicate and interact with each other. It has become an integral part of our daily lives, especially for students. While social media has its benefits, it also has negative effects. In this article, we will explore the impact of social media on students.

It's requested to parents to advise their children to spend time on E-learning, New Skills, and Modern Technology rather than wasting time on social media, likes, and shares.

**Why Soybean, A Protein Rich Crop Not Widely Cultivated In Pakistan**

*Arslan Mushtaq*

In the backdrop of the growing awareness about the benefits of soybean, the crop is yet to be cultivated in Pakistan. Soybean is a nutrient-rich crop, and it is not widely cultivated in Pakistan. The crop does not have a well-defined market in Pakistan, and farmers may find it challenging to sell their crops at a reasonable price. As a result, farmers are discouraged from cultivating soybean, and they need more support and infrastructure for soybean cultivation.

Additionally, the lack of proper research and development in the soybean industry in Pakistan is another significant challenge. The government has also not provided any such incentives to encourage the cultivation of soybean in Pakistan.

The crop does not have a well-defined market in Pakistan, and farmers may find it challenging to sell their crops at a reasonable price. As a result, farmers are discouraged from cultivating soybean, and they need more support and infrastructure for soybean cultivation.

While soybean cultivation in Pakistan is not as widespread as in other countries, there are still some promising signs. Let's explore these opportunities further.
