Pakistan's Higher Education Commission (HEC) is collaborating with the German Academic Exchange Service (DAAD) to offer scholarships to Pakistani students to pursue a master's degree in Germany. The HEC offers 2,000 scholarships, while 10,000 scholarships are available through the DAAD. This initiative aims to enhance academic collaboration and strengthen ties between Pakistan and Germany.

The scholarships cover full tuition fees, return airfare, and a monthly living stipend. The fields of study include Computer Science, Engineering, Business Administration, and Natural Sciences. Prospective applicants need to meet specific eligibility criteria and submit a detailed application package. The application deadline is typically in the fall, and successful candidates are notified shortly thereafter.

The scholarships are intended for Pakistani students who wish to enhance their academic and professional qualifications. By studying in Germany, these scholars will contribute to the development of Pakistan's educational system and the economy.

Weekly Edition

Pakistan Scholar Completes Animal Biometrics Project For Identification

Syed says that the app is about 99%, which means that the animal will be identified in 99% of the cases. The system will be used in collaboration with a government body during the next three years. He also points out that the app will be able to identify anyone or one can make it see.

Syed, a 24-year-old PhD Scholar at FAST-NUCES in Karachi, has been working on a project on animal identification, which is based on animal and microbial species and the owners of these animals.

The biometric verification technology that Syed and his research team are working on is known as animal biometrics. It involves recognizing animal blood vessels, eyes, fingerprints, DNA, and other unique biological traits. Since working with distinctive animal characteristics is challenging, this technology is recognized for its accuracy.

He worked hard, and Pakistan is now moving a step closer to successfully using this technology. Although it is currently being tested with horses, dogs, and other animals, it has the potential to be used for a wide range of applications, including cows and buffaloes.

The position of animal biometrics in Pakistan will be addressed by this technology. It is a game-changer. The technology is designed to identify animals.

Pakistan To Face Rising Acute Food Insecurity: UN Report

The World Food Programme (WFP) and the Food and Agriculture Organization (FAO) report shows that Pakistan is at risk of facing an acute food crisis, putting thousands of lives at risk.

In an early warning update released by the UN agency, the report highlights Pakistan's vulnerability to food insecurity, particularly in drought-prone areas and urban centers. The report warns that the situation may worsen in the coming months due to unpredictable weather patterns and the ongoing pandemic.

The report emphasizes the need for urgent action to address the risk of acute food insecurity in Pakistan, urging the international community to support efforts to sustain food security and nutrition.

Pakistan Students Secure Prizes At Huawei ICT Competition Global Final

The Huawei ICT Competition is a global technology competition that brings together the best and brightest students from around the world, showcasing their innovative and entrepreneurial skills. This year, Pakistani students have made a mark on the global stage, securing prizes in the competition.

With offices in Rome predicting that the 2021-2022 academic year will be challenging, food insecurity may worsen in Pakistan, putting 21 million people at risk.

The opening of an Italian office in Rome by the Joint Economic Commission (JEC) on Tuesday, 30 May, at the Italian Ministry of Foreign Affairs, supports the idea of a “business-as-usual” path. The JEC holds a meeting on Tuesday, 30 May, to discuss how the two countries can work together.

In a statement, FAO Director-General David Beasley said, “Climate change is now one of the few nations to face acute food insecurity.” The report urges immediate action to sustain food security and nutrition.

Pakistan Engineer Seeks Collab For Jet Engine Noise Control

A Pakistani engineer, with a background in aerospace, is seeking collaboration to control jet engine noise, a critical issue in aviation. The engineer, who has a Ph.D. in aerospace engineering, is looking to partner with companies or researchers interested in reducing noise pollution from jet engines.

In an interview with Arab News, the engineer discussed the importance of noise control in aviation and outlined the challenges faced in the field. He highlighted the need for innovative solutions and emphasized the importance of collaboration among experts.

The engineer's work involves developing technologies and strategies to mitigate jet engine noise, with a focus on reducing noise levels while maintaining performance. He believes that collaboration is essential to advance the field and create more sustainable aviation solutions.

OPINION

Livestock Of Pakistan: A Blessing Supporting Livelihood Of Poor Families

Pakistan is blessed with several blessings, for which we must be thankful. One of these blessings is livestock. Livestock play a crucial role in the lives of many families, particularly those living in poverty. They provide a source of income, sustenance, and security.

Since livestock is a part of the livelihoods of many families in Pakistan, efforts should be made to ensure their sustainable management. This includes providing adequate healthcare, nutrition, and shelter to livestock, as well as promoting good practices for breeding and reproduction.

In conclusion, livestock is a valuable asset for many families in Pakistan, and efforts should be made to ensure its sustainable management and support to the livelihoods of poor families.

PTA Conducts Quality of Service Surveys in 18 Cities Across Pakistan

The operators have finally received the necessary instructions for taking corrective actions to ensure an improvement in service quality up to the licensed standard.

To evaluate the effective service delivery offered by cellular mobile operators (CMOs) in their catchments, the Pakistan Telecommunication Authority (PTA) conducted independent Quality of Service (QoS) surveys in eighteen (18) cities throughout Pakistan, namely, Balochistan, Sindh, Khyber Pakhtunkhwa, and Azad Jammu & Kashmir (AJK).

As part of the surveys, a cutting-edge automated QoS Monitoring & Benchmarking Tool was used to check QoS Key Performance Indicators (KPIs) for Voice, SMS, and Mobile Broadband, as well as Cellular Mobile Network (CMN) Service Quality (QoS) and Cellular Mobile Network Quality of Service (Quality of Experience, QoE). The survey teams chose their survey routes on the basis of the ranking of service coverage and the mobile services and colonies in the surveyed areas, according to a press release from PTA.

The surveyed areas included regions with a high concentration of population and business centers to full extent. In a few locations, it has also been discovered that some Voice KPIs fall below the licensed threshold.

The operators have finally received the necessary instructions for taking corrective actions to ensure an improvement in service quality up to the licensed standard.

Collaboration With China To Improve Food Security in Pakistan: Dr. Safdar

Administration and the agricultural sector will contribute to food security of Pakistan, according to Dr. Safdar, Director General of the CPEC Cell at the Higher Education Commission of Pakistan (HEC).

According to him, 113 training sessions with Chinese universities and industry experts have been arranged, which would yield noticeable results.

The director of ORIC, Dr. Jafar, added that Pakistan’s per-acre agricultural production is extremely lower.

IAC Partners With Rubika France For Game Design Education

The training sessions were designed to offer youth new opportunities for professional growth and enhance their teaching abilities.

The world’s thirteenth animation school, Rubika, is also registered second in the country. The panel included eminent experts from Pakistan and India.

Specific subjects were also covered in VFX sessions, includ- ing student assessment, technological integration, and differentiation of the education sector in the field of VFX animation.

Mr. Gaddi, a spokesman for Rubika, has said that the education system is in a flourishing stage.

I am thrilled about this collaboration and believe we can create a positive and transformative impact on our students’ learning experiences and contribute to the global pedagogy community.

It was a very productive session and we are eager for more opportunities to help Pakistan’s game and animation design industry grow.

With the gap between academia and industry wide, IAC is well positioned to give students a glimpse of the film industry, which is a stepping stone to success.

IAC offers a four-year bachelor’s degree in animation, which is the first in Pakistan.

Rubika’s corporate social responsibility (CSR) program includes initiatives aimed at encouraging student assessment, technological integration, and differentiation of the education sector in the field of VFX animation.

The concept of collaborative learning and innovation is further supported by the IAC-Rubika (IAC) partnership with Rubika France, the reference school in France, and renowned rubika of the reference school.

Through the development of creative content, a first in Pakistan.

IAC and Rubika France have in mind, IAC offers a four-year bachelor’s degree in animation, which is the first in Pakistan.

Consumer Technology Brand Vivo Organises Virtual Event Vivo 5G Talk

Vivo, a leading mobile technology brand, is scheduled to announce the highly anticipated potential uses of 5G technology with Chinese universities.

Ms. Jade Gardais, a spokesperson for Rubika France, noted that the traditional manufac- turing of the pedagogy community is further supported by the IAC-Rubika (IAC) partnership with Rubika France, the reference school in France, and renowned rubika of the reference school.

The training sessions were designed to offer youth new opportunities for professional growth and enhance their teaching abilities.

Narc-Kanjee has been developed by the Institute of Agri-Biotechnology and Genetic Resources, National Agricultural Research Center, Islamabad. A promising line was selected from indigenous germplasm collected from the Lahore area during 2002–2003 and given the number MP120.

In conclusion, Nigella sativa is effective in changing the lipid profile significantly in a way that is beneficial to the human body. The early treatment of children with herbal medicine for diseases associated with high cholesterol levels can be considered a feasible strategy. A larger study with an adequate sample size is recommended to confirm the results obtained in this study. The remaining 5,000 were operated by the Institute of Agri-Biotechnology and Genetic Resources (NARC), Islamabad. A promising line was selected from indigenous germplasm collected from the Lahore area during 2002–2003 and given the number MP120.

It was observed that Nigella sativa works excellently well in many parts of the country due to its easy cultivation and its ability to be cultivated on the physico-chemical properties of oil and oil components. The biological properties of Nigella sativa have been studied for some time in the pharmaceutical and health sectors. Many scientific studies have reported that the black seed oil of Nigella sativa possesses impressive-multipurpose properties because it contains at least 10% of the highly powerful organosoluble active component Nigella sativa (N. sativa) seed oil. The presence of various in vivo and in vitro biological properties in the seed are responsible for its medicinal and health potential.

The presence of Nigella sativa on the list of herbal medicines is due to its ability to treat various ailments (Afzal and Naqvi, 2004). NIGELLA SATIVA OIL (N.S) is the active constituent with an effect of analgesic action and anti-diarrhoeal. Nigella sativa is considered one of the most effective seed oils for the medicinal and pharmaceutical industries due to its high content of alkyl aryl ketones and thiazole compounds and the presence of various chemically active components.

It is observed that the ratio of moderate to severe cases is more than 90 percent in the target population and the population is generally classified into two types: patients in whom the disease is mild and those in whom the disease is severe. It is also observed that the fisherman community is the most benefited by the benefits of animal rearing. Moderate animals are used in the breeding process. Mostly freshwater fish and livestock are used, which serves help in improving production potential. It is time to evaluate and compare the animal products of local fish and livestock and livestock in the world. The 800 fish cattle are used, and fish cattle are used in the high milk production in the world, and it produces 15-70 liters in 33 days. Followed by Norwegian Red, known to produce 10,000 liters per year and Kangaroo, also 10,000 liters per year.

The present study was conducted on the physico-chemical properties of oil and oil components. The presence of various in vivo and in vitro biological properties in the seed are responsible for its medicinal and health potential.
Probiotics, known as good or friendly bacteria and yeasts, have been gaining attention in recent years due to their potential health benefits. Probiotics, introduced as dietary supplements or foods, are live organisms that have beneficial effects on human beings.

Research suggests that probiotics generate positive effects on mood disorders such as anxiety and depression by modulating certain neurotransmitters and brain-derived neurotrophic factors in the brain.

Specific strains of probiotics can help restore the balance of microorganisms and reduce AAD (allergic adverse drug events). Probiotic consumption has been shown to reduce the incidence of散文: immuno-inflammatory A.

Some probiotic strains are known to increase the absorption of essential vitamins and minerals, such as B vitamins, calcium, iron, and zinc. By improving the ability to absorb these nutrients, probiotics can contribute to better health.

Kratom is a tropical tree that thrives in warm and humid environments, well-drained soils, and areas with high humidity. Kratom leaves contain a variety of alkaloids, including mitragynine and 7-hydroxymitragynine, which can cause changes in mood, particularly when consumed in high doses.

This may lead to an overgrowth of unhealthy microorganisms that cause antibiotic-associated diarrhea (AAD). A probiotic supplement can help return the balance of microorganisms and reduce AAD.

Kratom has been gaining popularity as an alternative medicine, particularly in Southeast Asia. It is known for its psychoactive and medicinal effects, and it is grown and used in various cultures.

Kratom has been used for centuries to treat various ailments, including respiratory problems, upper respiratory infections, and anxiety. It is often used in traditional medicine systems and is a natural alternative to pharmaceuticals.

Kratom's effects on mood disorders such as anxiety and depression may be due to its ability to modulate neurotransmitters and brain-derived neurotrophic factors, which have been implicated in the regulation of mood.

Kratom's popularity has increased in recent years, particularly in Southeast Asia, where it is known for its psychoactive and medicinal properties. However, there are concerns about its potential risks and adverse effects, including addiction and dependence. It is important to be aware of these risks and to use Kratom responsibly.

Research on probiotics and their effects on mood disorders is ongoing, and more studies are needed to fully understand the mechanisms involved.

It is important to consult a healthcare professional before using Kratom or other herbal supplements, as they may interact with other medications and have potential side effects.
African Cheetah Populations In Danger As India Imports More Animals

The study's authors believe that the decline in African cheetah populations is due to a number of factors, including habitat loss, poaching, and competition from other predators.

A new study published in the journal Nature suggests that India, home to several large African and some smaller African and Asian populations of cheetahs, is not one of the countries where the wild cheetahs are likely to thrive. The study found that the Indian government has imported more than 100 African cheetahs since 1997. These cheetahs have been released into a number of different protected areas in India, but they have not been able to establish sustainable populations. The study's authors believe that the Indian government should stop importing African cheetahs and focus on conserving the cheetahs that are already in India. They also believe that the Indian government should do more to protect the wild cheetah habitat and reduce poaching.

Cocoa Powder Linked to Menstrual Health in Africa: Study Reveals

The study found that cocoa powder, which is a popular ingredient in chocolate and other foods, can help address the challenges facing women in Africa. The study revealed that cocoa powder can help prevent and treat a number of health issues, including menstrual disorders, education, and health care. The study also found that cocoa powder can help reduce the costs of sanitary products, education, and health care. The study's authors believe that cocoa powder can be used to address the challenges facing women in Africa and can help improve their quality of life.

A tidal energy plant in China has successfully operated for over 5 years, marking a major milestone in the renewable energy sector.

The plant, located near Xiamen Island, has been developed by Chinese company Marine Current Energy (MCE) and has a capacity of 17 megawatts. It has contributed to the clean energy mix in China for over 5 years, marking a significant achievement for the tidal energy industry. The technology promises to provide a reliable source of electricity that can be a vital asset to the grid.

China's First Tidal Energy Plant Successfully Operates For Over 5 Years

China's Dietary Guidelines Could Help Improve Health And Sustainability

A new report from the World Health Organization (WHO) highlights the importance of the China’s Dietary Guidelines and how they could benefit from a global shift towards healthier foods.

The report, titled “World Report on Diet, Physical Activity and Health,” found that widespread adoption of healthier food across China could yield a triple win: it would improve health, reduce environmental impact, and improve food security.

The report notes that China’s Dietary Guidelines for 2020-2030 are a comprehensive set of recommendations that provide valuable guidance in achieving a healthy diet. The guidelines are particularly important in light of the rising rates of obesity and chronic diseases in China. This report finds that widespread adoption of healthier food could have a significant positive impact on China’s health, well-being, and environment.

China’s First Tidal Energy Plant Successfully Operates For Over 5 Years

A tidal energy plant in China has successfully operated for over 5 years, marking a major milestone in the renewable energy sector. The plant, located near Xiamen Island, has been developed by Chinese company Marine Current Energy (MCE) and has a capacity of 17 megawatts. It has contributed to the clean energy mix in China for over 5 years, marking a significant achievement for the tidal energy industry. The technology promises to provide a reliable source of electricity that can be a vital asset to the grid.

China’s Dietary Guidelines Could Help Improve Health And Sustainability

A new report from the World Health Organization (WHO) highlights the importance of the China’s Dietary Guidelines and how they could benefit from a global shift towards healthier foods.

The report, titled “World Report on Diet, Physical Activity and Health,” found that widespread adoption of healthier food across China could yield a triple win: it would improve health, reduce environmental impact, and improve food security.

The report notes that China’s Dietary Guidelines for 2020-2030 are a comprehensive set of recommendations that provide valuable guidance in achieving a healthy diet. The guidelines are particularly important in light of the rising rates of obesity and chronic diseases in China. This report finds that widespread adoption of healthier food could have a significant positive impact on China’s health, well-being, and environment.

Tencent’s Honor Of Kings, also known as King of Glory, is a multiplatform online game that has successfully operated for over 5 years, marking a major milestone in the industry.

The mobile game was released in 2015 and has since become a cultural phenomenon in China. The game was launched in 2015 and has since become a cultural phenomenon in China. The game is played in a 1v1 format, with each player controlling their own team and competing against each other. Players can choose from a variety of different heroes that suit their own unique abilities.

The game is fast-paced and action-packed, and requires a lot of teamwork and strategy to succeed. Honor of Kings has been praised for its graphics, gameplay, and community. The report notes that widespread adoption of healthier food could have a significant positive impact on China’s health, well-being, and environment.

The number of PhD graduates in Malaysia has increased in recent times, but the number of job opportunities for PhD graduates has not kept pace. The number of PhD graduates in Malaysia has been increasing, while the number of job opportunities for PhD graduates has not increased at the same rate. As a result, young PhD graduates are uncertain about their career future and finding jobs that align with their skills and interests is a challenge.

There are a number of factors that have contributed to this situation. One factor is that Malaysia has a relatively small workforce, which means that there is a smaller pool of job opportunities. Another factor is that many PhD graduates are looking for jobs that align with their skills and interests, but the number of available positions may not be sufficient to meet this demand. As a result, many PhD graduates are considering alternative career paths or seeking to enhance their skills and knowledge through further education or training.

Another professor of management says that planning islands of trees in oil palm plantations is a promising way to increase biodiversity within a region. The islands of trees provide a platform for various species to interact with each other and benefit from the biodiversity. The trees also provide food and shelter for birds, butterflies, and other animals. In addition, the islands of trees can help to reduce the impact of oil palm plantations on the local environment. The islands of trees provide a habitat for a variety of animals and contribute to the maintenance of the local ecosystem.

ASEAN Countries Urged To Form Regional Space Agency At Space Week

A regional space agency would provide a platform for ASEAN countries to work together to develop and implement space-related development projects. "Instead of doing things separately, we can work together to build a stronger space program," says one expert. The program is estimated to cost $28 billion. "ASEAN countries have always discussed and networked, maybe to some extent," he adds. "But the focus now is on the space program, where we can pool our resources and cooperate to meet the needs of ASEAN countries and beyond."
the areas of customer experience, data analytics, cyber security, and regulatory compliance, are looking for ways to disrupt the insurance industry. Insurance companies are using new technologies, such as artificial intelligence and blockchain, to streamline the application process and provide more support to researchers. We also need to do more to promote research and innovation, and to fund the EU. If we don't, we will fall behind our competitors," he added further.

Carsten Mortensen, former Commissioner for Research, Science and Innovation, said: "The EU needs to find ways to address this shortfall of more than €1 billion in the global economy," he emphasized.

"There was a reason for subsidizing solar farms," he said. "It was to create a market for renewable energy, and it was also to promote research and innovation. We need to increase funding, and they are also portable enough to take with you on the go. There is a lot of great gaming laptops to choose from in Europe in 2023. The best laptops for you will depend on your budget, your gaming needs, and your personal preferences. We have very high expectations for the future in Europe. In recent years, they have increased"...
Environmental groups say the US is blinding its eye to the science behind the US Environmental Protection Agency’s Clean Water Project. The Natural Resources Defense Council’s 2020 ruling struck down a lower court ruling that had rolled back environmental protections. In the Court of Appeals for the District of Columbia, the US Supreme Court has overturned a lower court ruling that had overturned the body of Clean Water Act regulations.

The US Supreme Court on Monday, June 5, 2023, overturned a lower court ruling that had overturned the body of Clean Water Act regulations.

The court’s majority argued that the Clean Water Act only applies to wetlands that have a “significant nexus” to navigable waterways.

The majority argued that the Clean Water Act only applies to wetlands that have a “significant nexus” to navigable waterways.

Environmental groups say the decision of the US Supreme Court on Monday, June 5, 2023, is a “disaster” for wetlands and the environment.

The scientists, led by Yuxin Wu, a Berkeley Lab scientist, are working on solutions to enable systems to self-monitor in real-time for potential environmental impacts in conjunction with specialized monitoring systems to detect harmful conditions on their own.

Researchers at the Lawrence Berkeley National Laboratory are developing solutions to enable systems to self-monitor in real-time for potential environmental impacts in conjunction with specialized monitoring systems to detect harmful conditions on their own.

According to the American Society for Biochemistry and Molecular Biology (ASBMB), scientists say they are finding new applications for the use of artificial intelligence in the field of biochemistry and molecular biology. One of the most promising clean energy technologies, floating offshore wind turbines (FOWT), have a potential market value of more than $100 billion. In deep water, where winds are stronger, they can harvest more than twice as much energy, they note. Researchers have also been exploring the use of artificial intelligence in the field of biochemistry and molecular biology.

Approved Medical Treatments: Pay Up To Out-Of-Pocket Maximum

Your health plan will reimburse you for all expenses for covered services and expenses up to the limit or cap you set in the plan year plus any out-of-pocket amounts you and your doctor pay. You will only have to pay the out-of-pocket maximum (OOPM) for approved medical treatments for a given plan year. Your health plan will reimburse you for expenses covered for the remainder of the plan year once you've met your Out-Of-Pocket Maximum. The following costs are covered by the OOPM:

- Deductibles
- The share you must pay for covered procedures for which health insurance will not cover

Your health plan will only cover expenses for which it has paid a benefit. You are responsible for paying the OOPM and any other expenses not covered. You and your doctor will continue to receive statements for services you receive.

Sex Life Linked To Improved Memory Function, Study Finds

Researchers from the University of California, San Francisco examined data from over 1,000 adults for the study and discovered that those who had sex at least once a week performed better on memory tests compared to those who had sex less frequently. The production of chemicals like oxytocin and dopamine during sex, according to the researchers, may be the key to improved memory function.

Eлон Musk Regains Title Of Richest Person of World

In order to reclaim his position as the richest person in the world, Elon Muskdeclared that he owned a large number of goods comprising a large net worth.

The study discovered that high privacy concerns are accompanied by a reluctance to share personal information, especially for modest goods, with their friends and family. According to the study, people with modest goods are more likely to experience privacy concerns than those with luxury goods. The study published in the journal PLOS One, which included data from over 1,000 adults, found that those who had sex at least once a week performed better on memory tests compared to those who had sex less frequently.

Innovative Turbine Technology Advances Fight Against Climate Change

The renewable energy sector is on the rise, with new technologies being developed to combat climate change. One such technology is the Innovative Turbine, which is designed to be more efficient and durable than traditional turbines.

Food Production Remains Leading Driver of Biodiversity Loss Survey

A recent study published in the journal Nature found that food production remains the leading driver of biodiversity loss, with agriculture accounting for more than 70% of global biodiversity loss. The study also found that the production of crops and livestock is the leading cause of biodiversity loss, with the production of crops such as maize, soy, and rice being the most significant drivers of biodiversity loss.

71 African Startups Named Regional Winners At Global Startup Awards

GSA Africa is a platform that was established in 2021 with the goal of showcasing and growing Africa’s most promising startups. The competition received submissions from over 1,000 startups, with 524 applications from Africa and 194 applications from the rest of the world.

El Diablo IV Early Access Offers Glimpse Of Next Chapter In Series

Players will be able to choose Diablo IV opening act, which takes place in and around the city of Westmarch and its surroundings, during early access. According to BlizzConline Entertainment, Diablo IV Early Access offers players a glimpse of the game’s Digital Deluxe or Ultimate Edition will have access to the full game at launch.

The network may be challenging if your doctor or hospital is not included in the network. You have more room to select your own network where you can manage your out-of-pocket expenses by doing this.

Ethan from Shangri-La shared with the players that the game’s Digital Deluxe or Ultimate Edition will have access to the full game at launch.

By reading internet reviews or asking for referrals from friends and family, you can find out more about the quality of the care being provided.
